

IS YOUR CURRENT GRAFFITI REMOVAL CHEMICAL CERTIFIED SAFE TO USE?

There are many graffiti removal products that contain dangerous chemicals such as.....

Xylene - which can cause
 Liver & kidney damage, respiratory disease, blindness, cardiac malfunction

Toluene - which can cause
 Head aches, dizziness, drowsiness, numbness, unconsciousness & liver damage

Repeated exposure may cause damage to the central nervous system (which is irreversible)

N-Methyl-2-Pyrrolidone - which can cause
 Respiratory failure, liver & kidney damage, sterility and mutations in unborn fetuses.

It is recommended, when using any of these products, you must wear suitable respiratory equipment, chemical proof gloves and a chemical proof suit that is flame retardant.

Remove graffiti the safe and responsible way

All of Graffiti Removal Systems chemical products are free of

Xylene
 Toluene
 N-Methyl-2-Pyrrolidone
